SKIN ANALYSER

SKIN ANALYSER
from Prolou -

PUTTING YOU
IN CONTROL.

This product uses the latest Bio-electric Impedance Analysis (BIA) technology to immediately and automatically detect the moisture, oil and softness of your skin. Simply place the end of the Analyser on your skin for 2-3 seconds, until you hear a beep. The LCD screen will then display the reading.

It is suitable for both professional skin-care consultation and personal use. For best results ensure the skin surface is free from impurities.

BIA works by measuring the percentage of fat free mass (body liquid and electrolyte) and fat mass (fat does not contain water) in our body tissue.

Digital Display

Features:

1. Single Key Operation
2. Easy to read LCD Display Pattern (With Back light Source)
3. Anti Slip Human Engineering Design
4. CR 2032 Lithium Battery Supplied.
5. Low Voltage Display
6. Works in 2 - 3 seconds
